

BRICKLOCK/BLOCKLOCK

for Joint Reinforcing

- ▶ Manufactured in New Zealand
- ▶ Made from 4mm Galvanised and Stainless Steel
- ▶ Bricklock/Blocklock is recommended for stack bonding construction (standard brick veneer, walls and fences) prone to cracking or movement and general strengthening. We recommend installing every 5th course.

- ▶ Bricklock is made in straight lengths of 2.0 metres and are sold only in bundles of 10 (20 lineal metres)
- ▶ Also available are Corners & Tees in bundles of 10
 - Corners used every 6th or 8th course on standard Brick Veneer
 - Junctions every 6th course for columns, alternating opposing corners

“Disclaimer - ‘Bricklock’ is designed to add strength to the brick veneer and is over and above normal New Zealand Building Code for brick veneer construction. At no stage do Eaglewire guarantee that it will completely stop any possible cracking in the veneer.

Bricklock & Blocklock		Eaglewire Code	
Description	Unit	Galvanised	Stainless Steel
